"Human immunodeficiency virus type 1 Nef binds directly to LCK and
"Human immunodeficiency virus type 1 Nef binds directly to LCK and
"Human immunodeficiency virus type 1 Nef binds directly to LCK and
"The directivated protein kinase, inhibiting kinase activity.";

"I J. Virol. 70:6701-6708(1996).

"I FUNCTION: Involved in both the initiation and regulation of
melosis, mitosis, and postmitotic functions in differentiated
cells by phosphorylating a number of transcription factors such as
ELK-1. Phosphorylates EIF4EBP1, required for initiation of
translation. Phosphorylates microtubule-associated protein 2
(MAP2) (By similarity).

-!- CAPALYTIC ACTIVITY: ATP + a protein = ADP + a phosphorylated in

-!- COPACTOR: Magnesium (By similarity).

-!- ENZWHE REGULATION: Activated and tyrosine phosphorylated in
response to insulin and NGFE.

-!- SUBBUNIT: Binds to HIV-1 Nef. This interaction inhibits its kinase

cdc2 family and expressed in murine hematopoietic stem cells.";

Dokl. Akad. Nauk SSR 324:893-897(1922).

1- FUNCTION: Involved in both the initiation and regulation of melosis, mitosis, and postmitotic functions in differentiated cells by phosphorylating a number of transcription factors such such in Phosphorylates EIF4EBP1; required for initiation of translation. Phosphorylates microtubule-associated protein 2 (MAP2) (By similarity).

                             translation initiation.";
Science 266:653-656(1994).
-!- FUNCTION: Involved in both the initiation and regulation of melosis, mitosis, and postmitotic functions in differentiated cells by phosphorylating a number of transcription factors such as ELK-1. Phosphorylates BIF48BP1; required for initiation of translation. Phosphorylates microtubule-associated protein 2 (MAP2) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ProDom; PD000001; Prot_Kinase; 1.

                                                                                                                                                                                                                                                                                                                                                            DEVELOPMENTAL STAGE: Increased expression during development. PTM: Autophosphorylated on threonine and tyrosine residues. SIMILARITY: Belongs to the Ser/Thr protein kinase family. MAP kinase subfamily.
                                                                                                                                               CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein. COFACTOR: Magnesium (By similarity).
ENZYME REGULATION: Activated and tyrosine phosphorylated in response to insulin and NGF.
SUBCELLULAR LOCATION: Nuclear (isoform B).

Kasahara T., Higashi C., Okano T., Fukada Y.;
Bubmitted (APR-2001) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.

Indentification of the regulatory phosphorylation sites in
pp42/mitogen-activated protein kinase (MAP kinase).";
EMBO J. 10.885-892(1991).
I. PHOKION: Involved in both the initiation and regulation of
melosis, mitosis, and postmitotic functions in differentiated
cells by phosphorylating a number of transcription factors such as
ELK-I. Phosphorylates microtubule-associated protein 2
(MAP2) (By similarity).
C. I. CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphorotein.
C. CORACTOR: Magnesium (By similarity).
C. I. ENZYME REGULATION: Activated by phosphorylations and
C. Threonine in response to insulin and NGF. Both phosphorylations
are required for activity (By similarity).
C. I. TISSUE SPECIFICITY: Widely expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This Swiss-Prot entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- DEVELOPMENTAL STAGE: Increased expression during development.
-!- PTM: Autophosphorylated on threonine and tyrosine residues, which correlates with a slow and low level of autoactivation.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. MAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Science 266:653-656(1994).
-1- FUNCTION: Involved in both the initiation and regulation of malosis, mitosis, and postmitotic functions in differentiated cells by phosphorylating a number of transcription factors such ELK-1. Phosphorylates EIF4EBE1; required for initiation of translation. Phosphorylates microtubule-associated protein 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Phosphothreonine (activates the kinase) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein. COFACTOR: Magnesium (By similarity).

ENZYME REGILATION: Activated by phosphorylation on tyrosine and threonine in response to insulin and NGF. Both phosphorylations are required for activity.

TISSUE SPECIFICITY: Highest levels within the nervous system, expressed in different tissues, mostly in muscle, thymus and

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                       US-10-623-108-2

Sequence 57, Application US/09417197

Patent No. 6518021

GENERAL INFORMATION:

APPLICANT: Ole THASTRUP, et al.

TITLE OF INVENTION: A Method For Extracting Quantitative Information Relating To An IT:

TITLE OF INVENTION: On A Cellular Response

FILE REFERENCE: 3759-0110P

CURRENT PILING DATE: 1999-10-07

NUMBER OF SEQ ID NOS: 143

SEQ ID NO 57

LENGTH 624
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
